

## Maintenance systems providing poultry welfare and production results

### S u m m a r y

Different systems of poultry production were compared in respect of welfare of birds and obtained results of production. Each of the systems included both positive and negative features. Thus, it is difficult to define unequivocally, which of them provides both humanitarian maintenance conditions and high productivity of birds as well as can satisfy consumer demands pertaining to product quality. In this situation, it seems necessary to compromise between welfare of birds and their productivity.
